

Job Description: Senior .NET Developer

Position Overview

We are seeking a talented and experienced **Senior .NET Developer** to join our core engineering team. In this role, you will be responsible for designing, building, and maintaining high-performance, scalable backend services and cloud-native solutions. You will collaborate closely with cross-functional teams to architect robust systems using modern Microsoft technologies and cloud infrastructure.

Key Responsibilities

- **Architecture & Development:** Architect, develop, and deploy cloud-based software solutions and robust RESTful APIs utilizing C# and .NET 8 / ASP.NET Core.
- **System Design:** Implement modern architectural patterns (such as CQRS and microservices) to ensure system scalability, decoupling, and high maintainability.
- **Data & Messaging Management:** Optimize data persistence strategies using Entity Framework Core and SQL Server, and implement reliable asynchronous messaging/caching systems.
- **DevOps & CI/CD:** Maintain and improve automated deployment flows using Docker containerization and Azure Pipelines.
- **Mentorship:** Provide technical leadership and mentorship to junior developers, championing clean code principles, SOLID design patterns, and rigorous unit testing.

Required Technical Skills

- **Languages & Frameworks:** C#, .NET 8, ASP.NET Core, Web API, LINQ.
- **Data & Persistence:** Entity Framework Core (EF Core), Microsoft SQL Server.
- **Caching & Messaging:** Redis, RabbitMQ (or equivalent message brokers).
- **Testing Frameworks:** xUnit, Moq, or similar automated testing tools.
- **Cloud & DevOps:** Docker, Azure DevOps / Azure Pipelines, and cloud-native backend services.

Qualifications

- **Education:** Bachelor's Degree in Computer Science, Software Engineering, or a related technical discipline.

- **Experience:** Minimum of 4-5+ years of professional backend software development experience using the Microsoft technology stack.
- Strong commitment to writing clean, maintainable, and highly testable code.
